The Avro Vulcan was a British strategic bomber that served from the 1950s to the 1980s. It was a large, delta-winged aircraft with a range of over 4,000 miles. The Vulcan was armed with a variety of weapons, including nuclear bombs and air-to-surface missiles.

The Vulcan was developed in the late 1940s and early 1950s. It was designed to be a high-altitude, long-range bomber that could penetrate the Soviet Union's air defenses. The Vulcan was first flown in 1952 and entered service with the Royal Air Force in 1956.

The Vulcan was used in a variety of roles during its service life. It was used as a nuclear deterrent during the Cold War, and it was also used in combat operations during the Falklands War. The Vulcan was retired from service in 1984.

Rowland White's book, *Vulcan 607*, is a fascinating account of the aircraft's development, its operational history, and its eventual retirement. White tells the story of the Vulcan through the eyes of the men and women who flew it, maintained it, and supported it. The book is full of fascinating details and insights, and it is a must-read for anyone interested in military aviation.

The Avro Vulcan: A Technical Marvel

The Avro Vulcan was a technical marvel. It was one of the first aircraft to be designed with a delta wing, and it was the first British aircraft to be powered by jet engines. The Vulcan was also one of the first aircraft to be equipped with a radar bombing system.

The Vulcan's delta wing gave it a number of advantages over other aircraft. It was more aerodynamically efficient than a conventional wing, and it also gave the Vulcan a greater range and altitude. The Vulcan's jet engines gave it a top speed of over 600 miles per hour, and its radar bombing system allowed it to bomb targets with great accuracy.

The Vulcan was a formidable weapon. It was one of the most powerful bombers in the world, and it was capable of carrying a variety of nuclear and conventional weapons. The Vulcan was also one of the most reliable aircraft in the world, and it had a long and distinguished service record.

The Vulcan in Service

The Vulcan entered service with the Royal Air Force in 1956. It was initially used as a nuclear deterrent, and it was deployed to bases in the United Kingdom, Cyprus, and Singapore. The Vulcan was also used in combat operations during the Falklands War. In 1982, a Vulcan was used to attack the Argentine airfield at Port Stanley.

The Vulcan was retired from service in 1984. It was replaced by the Panavia Tornado, a more modern and capable bomber. However, the Vulcan remains a popular aircraft with aviation enthusiasts, and it is still flown at air shows and events around the world.

Rowland White's Vulcan 607

Rowland White's book, Vulcan 607, is a fascinating account of the aircraft's development, its operational history, and its eventual retirement. White tells the story of the Vulcan through the eyes of the men and women who flew it, maintained it, and supported it. The book is full of fascinating details and insights, and it is a must-read for anyone interested in military aviation.

White's book is divided into three parts. The first part covers the development of the Vulcan, from its origins in the late 1940s to its entry into service in 1956. The second part covers the Vulcan's operational history, from its use as a nuclear deterrent during the Cold War to its use in combat operations during the Falklands War
